DETAILED ACTION

Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally **limited to a single paragraph on a separate sheet within the range of 50 to 150 words**. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Maguire et al.

In regard to claim 1, the Maguire et al. reference discloses an "apparatus" for storing (not shown) and transferring (see Fig. 1) comprising a "container" and "neck" (see col. 1, lines 27-29, 51-55; col. 2, lines 7-19 and col. 5, lines 61-65), a "spout assembly" (see Fig. 1) including a "fluid conduit" 200 having proximate and distal ends,

Art Unit: 3751

an integrally formed external circumferential conduit "sealing surface" 208 defining a "second obtuse angle" 504 (see Fig. 5) and said "neck" including an integrally formed internal circumferential container "sealing surface" defining a "first obtuse angle" (see col. 5, line 66 – col. 6, line 6).

In regard to claim 2, see "collar" 300 with the "first" and "second sealing postions" being when the "collar" 300 is loose and tight.

In regard to claim 7, the "obtuse angles" of the conduit and neck would have to be "generally equivalent" to make a proper seal.

Allowable Subject Matter

Claims 3-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. he Sneider reference pertains to a storing and transfer apparatus, similar to Applicant's device.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy L Maust whose telephone number is (703) 308-8900.
